initialize ArrayList words
initialize ArrayList definitions
boolean invalid = false
initialize Random object.
BufferedReader: read file until line==null.
Each line split. Store split lines in new String array
Index 0 of it add to ArrayList words.
Index 1 of it add to ArrayList definitions.
ArrayList words
ArrayList definitions
words and definitions read from the file are input to the conditional
for every index of words, if word.length() < 3
OR
if words.size() < 15
true
Invalid = true
false
Invalid = false

invalid (boolean)
If invalid, print "Vocab list invalid"
