	Urgent	Not Urgent
Important	**Do - (Your MVP)** • Process one given vocab list • Check if it is valid or not. If the words are more than 15 and if there are all words that are length of 3 or more letters. • Choose a word in order and scramble letters and ask player to unscramble • Increase points for correct responses until 15 words go by and end the game	**Schedule - (For V2.0+)** • More vocab list options • Ability for user to add their own personalized lists • Incorporate accents or special characters in Spanish or French. • Have option to end game early • Jumble up words and pick random word instead of going in order • Giving more tries whenever player gets question wrong.
Not Important	**Delegate - (Use a library)** • Using the IO libraries for reading the list of words • Use terminal to display and facilitate • Use existing vocab lists and themes • Using the array list class to store data • Using the Random and Collections classes to help with shuffling	**Delete - (Cut it)** • Making it for different languages like Hindi or Sanskrit with complex scripts • Generally more language options • Using a GUI • Additional game options for users to pick

	letters and choosing a random word
